Team Project: Peer Evaluation

You will evaluate each of your teammates based on their effort and contribution to your team project during each phase. This includes how well they communicate and work with the team. Do this individually. Your peer evaluations must be submitted in order for you to receive credit for the phase.

Let `n+1` be the number of members of your team, including yourself. Assign each of the other `n` team member a rating between 0 and 100, so that the total adds up to 100. This rating should reflect each member's team work, effort and contribution during the phase. <u>Do not assign any two members the same rating</u>. Then give a one sentence explanation of your rating for each of your `n` team members.

For example, suppose that Wilma, Fred, Pebbles, Barney, Betty and Bamm-Bamm are on a project team this semester. So for their team, `n = 5`. So Wilma must assign ratings to her 5 teammates that add up to 100, without assigning any two members the same rating. She does NOT evaluate herself.

Wilma might submit a Phase I peer evaluation that looks like this (**follow this format**):

Fred: 22
Pebbles: 18
Barney: 21
Betty: 23
Bamm-Bamm: 16

Fred: Fred was the team lead during this phase, and kept us all on track towards our goals.

Pebbles: Pebbles tried, but didn't contribute as much as most of the others and she cried a lot.

Barney: Barney was a good teammate - he did a lot of work on the frontend during this phase, and communicated well with others.

Betty: Betty worked really hard on data scraping and probably did more work than anyone else during this phase.

Bamm-Bamm: Bamm-Bamm tried, but his communication skills were lacking since all he ever says is "Bamm, Bamm."
